The Mining Equipment Prospector

BTI introduces biggest advance in scaling in the last 40 years

Breaker Technology, Inc. (BTI) announces the introduction of its QS45 Vibratory Pick Scaler. According to Frank Cargould, President of BTI, *"our QS45 vibratory pick scaler represents the biggest advance in hard rock scaling in the last 40 years. Our unit will double the production of the standard scaler with half the maintenance. Our vibratory pick can work as a standard pick or the integral hammer can be engaged in order to give extra impact energy when necessary."*

The extreme duty purpose built carrier features a telescopic boom with 45' reach, 330 degree boom rotation, and massive twin 6" lift cylinders. The tilt cylinder develops 40,000 lbs of peak force to the pick tip.Trunnion shock absorbing mounted telescoping cylinder develops 35,000 lbs of thrust in both directions.

For complete specifications and further details, please contact William Aldridge, Mining Manager, at 708-205-6060; baldridge@rockbreaker.com

BTI designs, manufactures and markets hydraulic rock breaker systems for the mining and quarrying industry in addition to a complete line of mobile mining equipment. The company also markets a complete line of hydraulic breakers and demolition attachments to the construction and demolition industry through an extensive dealer network. BTI has three locations in North America to support this network - Thornbury, ON Canada; Solon, OH and Riverside, CA. Further information on BTI's products and services can be found at www.rockbreaker.com
