The Mining Equipment Prospector

GETMAN

PERFORMANCE SERIES PR2 - GT50272

NEW VEHICLE DESIGN MEETS SAFETY AND ERGONOMIC DEMANDS

Getman's new Performance Series offers important improvements over the A64 chassis that increases reliability, lowers operating costs and enhances operator ergonomic and safety.

The most significant advancement is a dramatically improved articulation joint design, which lowers maintenance costs by allowing the joint to function for years before requiring servicing. This articulation joint performs the oscillation function, using tapered roller bearings in the articulation and a roller bearing for oscillation. It operates under less stress because vehicle frames on each side of the articulation joint move independently when driving over rough terrain.

The new Performance Series design allows for faster servicing, giving better access to all components. Some of the features include a lower front fender and an engine that sits higher in relation to the fender granting better access to the engine compartment.

Optional suspension packages and other changes have led to greater operator ergonomics and safety, which increases productivity. To achieve this, Getman optimized operator ergonomics and accommodated suspension systems to enable sustained, high-speed operation while maintaining directional control. The operator floor rides on rubber mounts to isolate it from noise and vibration. An optional operator air suspension system and shock absorber allow the operator station to float for greater isolation from the rugged terrain.

Available as an option is an air suspension system for the front axle which utilizes two air bags, providing spring support and maintaining ride height with varying loads.

Standard unit features include: operator control position at a 45° angle; tilt adjustable column, orbitrol controlled articulated steering; EC diesel engines; hot/cold side design with hydraulic fuel lines and electrical harness on the cold side away from the engine and the exhaust. An enclosed cab with a sound suppression package for 82 dBa is available as an option.

The Getman Performance Series is available in all models previously offered with the A64 chassis.
