TAMROCK

The Mining Equipment Prospector

Sandvik Mining and Construction offers the Solo 5, a long hole drilling machine for modern mining

Sandvik Mining and Construction has launched the Solo 5 series, a long hole drilling machines for underground excavation applications. The latest versions of the established Solo family to meet industry needs for modular design and common technology platforms.

This series of long hole drilling equipment can fit into small drifts as small as 3m by 3m and have particular applications in underground mining. This includes small scale sub-level stoping, vein mining and underground benching which is one of the most common rock blasting activities also used in civil construction applications.

All main long hole drilling components: boom, feed and cassette have been designed using the experience and know-how from the well proven 7 size class SOLO's. Additionally the new SOLO 5 series introduces the HLX5 drifter for long hole drilling.

The company is placing an increasing emphasis on producing equipment that fit the requirements of a dynamic and innovative industry. This means developing machines that fit into the modern work environment, are easy to use, reliable and compatible with other mining equipment of the same size. Improved safety and ergonomics are also important design trends in all of the company's new products.
The Underground Division is one of two business divisions operated by Sandvik Tamrock Corp. for all aspects of excavation and drilling activities world-wide. The company is part of the Sandvik group whose interests cover materials technology, machine tools, mining and construction. As a leader in its field, the Sandvik group has a turnover in excess of SEK 50 billion.

The SOLO 5 series is commercially available for deliveries in 2005.
